

Logan Green Trout Pond Restocked

This trout was landed recently at the Logan Green “**catch and release only**” trout pond. Given its size this fish is several years old, likely dating back to the first stocking of the pond in 2014. Its survival is an indication of the success of the city’s Logan Green Water Management System. With this system, water used to regularly flush filters at the Water Treatment Plant is passed through several settlement ponds to remove any impurities, then through a stream which feeds the fish pond. Eventually this water seeps back into the natural aquifer. The program has won five national and provincial awards.

The constant flow of water enables fish to survive the winter. The pond was restocked with some 300 eight inch trout June 16 to ensure numbers in the pond are maintained. A parking lot providing easy access to the trout pond is located off Queen Street just east of the Water Treatment Plant. **Remember this is a “Catch and release only” pond and when fishing use barbless hooks and handle fish as little as possible before returning to the pond.**
